Education

University of Szeged (SZTE), Szeged, Hungary *2024 – Present*
B.Sc. in Computer Science
Expected Graduation: 2027/06/30
GPA: 4.68 / 5.00

Selected Publications and Manuscripts

(Equal contribution / Co-first author, † Equal contribution / Co-second author)*

- **Linxiang Su**, András Balogh, "ATAC: Augmentation-Based Test-Time Adversarial Correction for CLIP", in **CVPR 2026 Workshop on Adversarial Machine Learning (AdvML)**, accepted. [OpenReview]
- Jiaxin Li, Yuxiang Wu, Zhenkai Zhang, Xinrui Shi, Haoyuan Wang, Yichen Zhao, **Linxiang Su**, Chenyang Yu, Mingyu Zhang, Yifan Ding, Boran Wen, Li Zhang, Ruiyang Liu, Yong-Lu Li, "HAT-4D: Lifting Monocular Video for 4D Multi-Object Interactions via Human-Agent Collaboration", in **19th European Conference on Computer Vision (ECCV)**, 2026, poster.
- Yong-Lu Li*, Zehao Wang*, **Linxiang Su**†, Yudonglin Zhang†, Xiaoqian Wu, Xinpeng Liu, Cewu Lu, "Pangea++: Unifying Semantic Space for Human Action Understanding", **under review at IEEE Transactions on Pattern Analysis and Machine Intelligence (TPAMI)**.

Research Experience

Undergraduate Researcher *Oct 2024 – Present*
Supervisor: Prof. Márk Jelasity, University of Szeged (SZTE)

- Led a first-author research project on test-time defense for adversarial robustness of vision-language models, resulting in a paper accepted at CVPR 2026 AdvML Workshop.arXiv
- Investigated and implemented a sparse attention mechanism to enhance dense representations in DINO ViT-S/16, improving PASCAL VOC semantic segmentation mIoU from 42.80 to 48.78 (+5.98 points). arXiv
- Developing a benchmark to evaluate the capabilities of LLM-based agents on diverse computer vision tasks, including classification, segmentation, and depth estimation.

Research Intern, RHOS, Shanghai Jiao Tong University *Dec 2025 – Present*
Supervisor: Prof. Yong-Lu Li, Shanghai Jiao Tong University (SJTU)

- Leading the **major revision of Pangea++ at IEEE TPAMI**, following substantial contributions to the original research on human action understanding.
- Proposed **Progressive Reliability-Aware Optimization (PRAO)** to address the positive-unlabeled (PU) learning problem in human action understanding.
- Built large-scale data pipelines for **2.3M videos** and conducted multi-node, multi-GPU training and evaluation using PyTorch DDP.
- Designed a data caching mechanism that **accelerated training and evaluation by over 10×**, enabling faster research iteration.

Research Intern, Provable Responsible AI and Data Analytics Lab, KAUST *Dec 2025 – Apr 2026 (Remote)*
Supervisor: Prof. Di Wang, King Abdullah University of Science and Technology (KAUST)

- Reproduced a state-of-the-art adversarial-attack-based copyright verification method for VLMs and explored generative-model-based alternatives.
- Evaluated hyperbolic-space noise injection for LLM instruction tuning, finding no consistent gains over uniform-noise baselines.

Awards & Additional Experience

- **First Place & Special Prize from AUMOVIO**, Spring 2026 Scientific Students' Conference (TDK), University of Szeged. Results Website
- **Artificial Intelligence (Practice) Tutor**, University of Szeged, Fall 2026

Technical Skills

- **Programming & Deep Learning:** Python, C++, Java, PyTorch, HuggingFace, OpenCV, scikit-learn
- **Systems:** Linux, Docker, Distributed Training (DDP, NCCL)
- **Languages:** Mandarin (Native), English (IELTS 7.0; R 8.5, L 8.0)
